# CALCULATION POLICY 

## What is maths mastery?

Teaching maths for mastery is a transformational approach to maths teaching which stems from high performing Asian nations such as Singapore. When taught to master maths, children develop their mathematical fluency without resorting to rote learning and are able to solve non-routine maths problems without having to memorise procedures.

## Concrete, pictorial, abstract (CPA)

Concrete, pictorial, abstract (CPA) is a highly effective approach to teaching that develops a deep and sustainable understanding of maths. Developed by American psychologist, Jerome Bruner, the CPA approach is essential to maths teaching in Singapore.
Pupils builds on their existing knowledge by introducing abstract concepts in a concrete and tangible way. It involves moving from concrete materials, to pictorial representations, to abstract symbols and problems.

Concrete is the "doing" stage. During this stage, students use concrete objects to model problems. This approach brings concepts to life by allowing children to experience and handle physical (concrete) objects. With the CPA framework, every abstract concept is first introduced using physical, interactive concrete materials.

Pictorial is the "seeing" stage. Here, visual representations of concrete objects are used to model problems. This stage encourages children to make a mental connection between the physical object they just handled and the abstract pictures, diagrams or models that represent the objects from the problem and makes it far easier for them to grasp difficult abstract concepts.

Abstract is the "symbolic" stage, where children use abstract symbols to model problems. Pupils will not progress to this stage until they have demonstrated that they have a solid understanding of the concrete and pictorial stages of the problem. The abstract stage involves the teacher introducing abstract concepts (for example, mathematical symbols). Children are introduced to the concept at a symbolic level, using only numbers, notation, and mathematical symbols (for example, $+,-, \mathrm{x}, /$ ) to indicate addition, multiplication or division.

## Bar modelling

The bar model method is a strategy used by children to visualise mathematical concepts and solve problems. The method is a way to represent a situation in a word problem, usually using rectangles.

## Solving Problems with Bar Modeling

## Number bonds

Number bonds are a way of showing how numbers can be combined or split up. They are used to reflect the 'part-part-whole' relationship of numbers. A lot of emphasis is put into number bonds from the early year foundation stages so that children can build up their number sense prior to learning addition and subtraction. In the early stages students would be introduced to number bonds with concrete experiences, for example children could be given 6 linking cubes and guided to understand that 2 and 4 make 6 , but that 1 and 5 also make 6 .

The mastery of number bonds is an important foundation required in subsequent mathematical learning and as a basis in the development of mental strategies. A strong number sense allows students to decide what action to take when trying to solve problems in their head.

$$

Partitioning 3d by 2d

| $12 \times 132=$ | $208$ |  |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  | $\sin$ | $: D 8$ | (E1) |
|  | $50+18$ | $10 \mathrm{O}$ | (€1) |
| 2 times | 200 | 60 | 4 |
| 10 times | 1000 | 300 | 20 |

$12 \times 132=1320+264$
$=1584$
It costs about 1584 Hong Kong dollars.

## Formal written method

(3) $12 \times 132=$

$$
132
$$

$\times \quad 12$
$264 \longrightarrow$ multiply by 2
$+1320 \longrightarrow$ multiply by 10
1584

Using known facts

Can you continue his method?
Grid method 3d by 2d

```
12\times132=
```

$12 \times 132=1320+264$
$=1584$

## YEAR 5

## Division

## Dividing by 10, 100 and 1000 <br> Partitioning

How many can we get from 4792?
(7) contains 1000 pleces.

## How many

 1000s in 4000?There are 4 in 4000 .

Here is the remainder.
$4000 \div 1000=4$
4 thousands $\div 1$ thousand $=4$

(2) How many $<$ can we get from 4792?
< contains 100 pleces.

Here's the
remainder
$4700 \div 100=47$
47 hundreds $\div 1$ hundred $=47$

There are 47 groups of 100 in 4700.

3 How many can we get from 4792?
contains 10 pleces.

$4790 \div 10=479$
479 tens $\div 1$ ten $=479$
 remainder.

Dividing 3 digit and 4 digit by 1 digit
Using place value counters to partition

$$
\begin{aligned}
2528 \div 8 & =300+10+5+1 \\
& =316
\end{aligned}
$$

## Abstract written methods

(2) - 's story

2528 ml of juice is put into 8 containers so that each container holds the same volume. What is the volume of juice in each container?
$2528 \mathrm{ml} \div 8=$ $\square$

Dividing with remainder Using PV counters

## With written methods

(2) $376 \div 5=$

My father did not write down $37 \rightarrow 35$. He did It mentally.

5 $\qquad$

3376 children in a school are put into 5 equal groups.
Is this possible?
$376 \div 5=75$ remainder 1
It is not possible.
There will always be one child left over, who does not belong to any group.

## As a fraction

4 376 ml of liquid soap is poured into 5 bottles.
Each bottle contalns the same amount of soap.
Find the volume of soap in each bottle.

## YEAR 6

## Place Value

## With counters and PV cards

(2) Show 5472737 on a place-value chart.

| millions | hundred <br> thousands | ten <br> thousands | thousands | hundreds | tens | ones |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Show 5472737 using number discs.

## Using vocabulary

The diglt 5 is in the millions place.
It stands for 5 millions or 5000000 .

The digit 4 is in the hundred thousands place.
It stands for 4 hundred thousands or 400000 .

The diglt 7 appears more than once.
7 is in the ten thousands place.
It stands for 70000 .

7 is also in the hundreds place.
It stands for 700 .

7 is also in the ones place.
It stands for 7 .

The digit 2 is in the thousands place.
It stands for 2000 .

The digit 3 is in the tens place.
It stands for 30 .
$5472737=5000000+400000+70000+2000+700+30+7$

We write 5472737 as five million, four hundred and seventy-two
thousand, seven hundred and thirty-seven.

## Rounding using numberlines

2 Round 8602112 to the nearest million.

8602112 is closer to 9 million than to 8 million.
$8602112 \approx 9$ million

3 Round 2904 391...

2904391 is closer to 3 million than to 2 million.
$2904391 \approx 3$ million

to the nearest 100000.

2904391 is closer to 2900000 than to 3000000.
$2904391 \approx 2900000$ (to the nearest 100000 )

YEAR 6

## Mixed Operations

(1)

2

(4)
made a different expression that has the value of 3 .

$$
(1+2) \div 3 \times 4+5-6
$$

Step 1: Perform the calculation in the brackets first.
Step 2: Multiply or divide whichever comes first.
Step 3: Add or subtract whichever comes first.

## Multiplication

Multiplying by multiples of 10
Using counters
$414 \times 10=\square$
100100100100 becomes $10001000(1000(1000)$
10 becomes 100
(1) 11 becomes 10101010
$414 \times 10=4000+100+40$
$=4140$

Building to written methods Using counters
(1) $20 \times 113=$

$10 \times 113=1130$
$20 \times 113=2260$
$10 \times 113=1130$

$1!$

Using informal jottings

## (2) $414 \times 20=$

Method 1
$414 \times 10=4140$
$414 \times 20=4140+4140$ $=8280$

Method 2
$414 \times 20=414 \times 2 \times 10$
$=828 \times 10$

using partitioning
(2) $23 \times 113=\square$
$20 \times 113=2260$
$\begin{aligned} 3 \times 113 & =339 \\ 23 \times 113 & =2599\end{aligned}$
23 boxes contain 2599 apples.
(3) $23 \times 113=\square$

$$
\begin{aligned}
& \begin{array}{r}
+\quad 339 \\
\hline 2599 \\
+2599
\end{array}
\end{aligned}
$$

23 boxes contain 2599 apples.
There are enough apples $\ln 23$ boxes.

1) $320 \times 31=$

100
$\underset{\substack{100 \\ 100 \\ 10}}{ } \xrightarrow{\times 10}$
 1200100 $\xrightarrow{\times 3}$

$3200 \times 3=9600$

$$
\begin{aligned}
& 320 \times 30=9600 \\
& 320 \times 1=320 \\
& \hline 320 \times 31=9920
\end{aligned}
$$

(2)
$320 \times 31=$

(3) $320 \times 31=$

| 100 | 100 |
| :--- | :--- |
| 10 | 100 |
| 10 | $300 \times 31=9300$ <br> $20 \times 31$ |
| $320 \times 31=9220$ |  |

Formal written method
5. $1320 \times 31=$

## Using known facts

(1) $114 \times 12=$

$$
114 \times 24=
$$

$\square$
10010 1 1 1 1

I can also use $114 \times 12$
to find $114 \times 24$
(2) $114 \times 24=$

(3)
$114 \times 24=$ $\qquad$
$\begin{array}{r}114 \\ \times \quad 20 \\ \hline 2280 \\ \hline\end{array} \begin{array}{r}114 \\ \times \quad 456 \\ \hline 45\end{array} \begin{array}{r}114 \\ \times \quad 24 \\ \hline 280\end{array} 114 \times 20$

| 114 |
| ---: |
| $\times \quad 20$ |
| 2280 |
| 114 <br> $\times \quad 46$ <br> 45$\longrightarrow \begin{array}{r}114 \\ \times \quad 24 \\ \hline 456\end{array}+114 \times 4$ |
| $+2280 \longrightarrow 114 \times 20$ |

4. Given that $114 \times 24=2736$, find the value of $2114 \times 24$.

$2114 \times 24=48000+2736$
$=50736$
Estimate by calculating $2000 \times 24$.

2
$3296 \div 32=$ $\qquad$

$\begin{aligned} 3296 \div 32 & =1648 \div 16 \\ & =824 \div 8\end{aligned}$
$8 \begin{array}{r}103 \\ \hline 824\end{array}$ $\begin{array}{r}184 \\ -800 \\ \hline 24\end{array} \longrightarrow 800 \div 8=100$

$10+10+10$

Using known facts

## Using bar models

2
$360 \div 12=\square$
$360=36$ tens $\quad 12 \begin{array}{r}360 \\ -\quad 36 \\ \hline\end{array}$

$360 \div 12=$

$3600 \div 12$ $\square$

36 hundreds shared equally by 12

Using Partitioning
(1) $3296 \div 32=$
